

TECHNICAL SHEET

Painted Glass

Painted Glass is decorative glass with a specially formulated coating applied to one surface, creating a smooth, opaque, and vibrant finish. The paint is typically applied to the back of the glass (back-painted glass), protecting the colored surface while delivering a sleek, high-gloss appearance. Painted glass is widely used in interior architectural and design applications where durability, hygiene, and modern aesthetics are desired.

Painted glass offers a sophisticated combination of modern aesthetics, durability, and low maintenance, making it an ideal solution for contemporary interiors that demand both visual impact and long-term performance.
